

"We found Pronto to be consistently producing quality feed for milking. It is the best variety out of the ten we trialed over the last few year for growing in mid-summer heat, thriving well for 16-20 days between watering."

Graham Pugh, Waaia VIC

Ultrastrike® film coat seed recommended

USES:

BEEF DAIRY HAY SILAGE

SOWING RATE

RAINFALL / IRRIGATION

Fast maturing for early grazing, silage and hay

- Sudan Grass X Sorghum cross
- Fine stemmed, wide leafed forage
- Provides good quality summer grazing
- Well suited to hay and silage production

Description

Pronto forage sorghum is a quick maturing forage that produces comparable yields and better quality feed than longer maturing sorghum hybrids.

Pronto has the ability to produce quality forage during the summer period with increased production from irrigation or summer rain due to the higher water use efficiency of forage sorghum. It is well suited to dairy and beef production and provides quick regrowth for 2-3 grazing's or cutting for hay/silage production over the summer period.

Pronto may be planted from early spring through to late summer with best establishment achieved when soil temperature is 16°C and rising.

Sowing rates will depend on the farming system, available irrigation or expected rainfall.

Marginal Dryland	@ 4 – 8kg/ha
Good Dryland	@ 8 – 20kg/ha
Irrigation/ high rainfall	@ 20 – 30kg/ha

LET'S GROW TOGETHER

Planning your forage and seed requirements in advance can make a big difference to your productivity. For over 75 years PGG Wrightson Seeds have been working with farmers to get the balance right.
